To: "P.J. Thompson" <peterjamesthompson101@gmail.com>

Dear user,

Your account has been banned for uploading content that is not permitted on Zenodo. After review, we found your submissions to be substantially AI-generated without a verifiable research basis. You can review [what content is not suitable for Zenodo](#), our [Terms of Use](#), and [General Policies](#).

This decision is final. These decisions are handled exclusively by the Zenodo team based on the policies linked above, and contacting other Zenodo or CERN channels will not result in a different outcome.

Best regards,
Zenodo Support

Subject: Appeal of account suspension – Ticket#3323517 – Peter Thompson

To: support@zenodo.org
Cc: info@zenodo.org

Dear Zenodo Support Team,

I am writing to appeal the suspension of my account (Ticket#3323517). You stated that my submissions are “substantially AI-generated without a verifiable research basis.” I respectfully request that you reconsider this decision.

I am an independent researcher with over 30 years of theoretical work in harmonic physics, unified field theory, and consciousness studies. My research culminated in a book (The Harmonic Framework of Reality Rev III, ISBN 978-1-300-04142-9), which was published in 2025 – before extensive use of AI writing assistance. The core equations, physical concepts, derivations, and testable predictions are my own original work.

I also have a disability: highly aggressive Dupuytren's contractions in all five forms (both hands). This severely restricts my ability to write, type, or use a keyboard for extended periods. I use an AI language model (DeepSeek) as an assistive writing aid – I dictate my ideas, and the AI helps me structure and articulate them. The AI takes instruction from me; the intellectual content and responsibility remain mine. This is analogous to using voice-to-text software or a human scribe. It is not automated content generation.

My research has a verifiable basis:

- The harmonic framework derives specific, testable predictions (32-step Shapiro ladder, 27 Hz gravitational wave line, 19:13:4 amplitude ratio, etc.).
- I have engaged with real experimental data (e.g., Josephson junction I-V curves from Ahmad et al., DOI:10.5281/zenodo.14162640) and produced a baseline analysis that clearly distinguishes between ground-state measurements and driven-state predictions.
- My ORCID (0009-0005-8688-7507) links to my published book and to the preprints.

I understand your need to prevent spam or wholly fabricated content. However, my submissions are genuine

research efforts, not automated nonsense. I ask for a manual review of my appeal, rather than an automated decision. I am willing to provide further documentation (e.g., early drafts, derivation notes, correspondence with other researchers) to confirm the originality of my work.

If the decision remains final, please at least allow me to download all my existing preprints and metadata before they are deleted, so I can preserve my intellectual output and move it to another platform.

Thank you for your time and consideration.

Sincerely,

Peter James Thompson

Subject: Follow-up to Ticket#3323517 – Disability discrimination and request for reasonable accommodation

To: support@zenodo.org
Cc: info@zenodo.org

Dear Zenodo Support Team,

I am writing to follow up on my appeal (Ticket#3323517). I wish to clarify my previous email, in which I explained that I have a severe disability (aggressive Dupuytren's contracture in both hands) that makes writing, typing, and using a keyboard extremely difficult or impossible for extended periods.

I use an AI language model as an assistive writing aid – not to generate content autonomously, but as a reasonable accommodation to overcome my physical limitation. I dictate my ideas and the AI helps structure and articulate them under my direct supervision. This is no different from using voice-to-text software, a scribe, or a speech-generating device.

Your decision to suspend my account because my submissions are “substantially AI-generated” fails to accommodate my disability. By applying a blanket ban on AI-assisted content without considering reasonable accommodations, you are effectively excluding a person with a disability from participating in your platform. This constitutes disability discrimination under:

- The Swiss Federal Act on the Elimination of Discrimination against People with Disabilities (DDA),
- The French Law No. 2005-102 on equal rights and opportunities,
- The United Nations Convention on the Rights of Persons with Disabilities (CRPD), to which Switzerland and France are parties.

I request the following reasonable accommodations:

1. Reinstate my account and allow me to continue uploading papers that are authored by me but written with the aid of AI as an assistive tool.
2. Alternatively, at a minimum, permit me to download all my existing preprints and metadata so that I can preserve my intellectual work.

If you refuse these accommodations, I will have no choice but to escalate this matter to the relevant human rights bodies, including the Swiss Federal Commission against Racism (which handles disability discrimination), the French Defender of Rights, and ultimately the UN Human Rights Committee.

I hope we can resolve this amicably without further escalation. I am willing to provide medical documentation or other evidence of my disability if required.

Thank you for your attention.

Sincerely,

Peter James Thompson

Subject: Formal Notice of Fraudulent Takedown and Wrongful Account Suspension – Urgent Request for Restoration

To: support@zenodo.org

Cc: info@zenodo.org

Subject: Evidence of fraudulent takedown – account suspension Ticket #3323517 – request for reinstatement

Dear Zenodo Support,

I refer to my previous appeal regarding the suspension of my account and the deletion of my 42 preprints.

Attached is a formal legal notice I have sent to the individual who filed the copyright complaint against my work (Tony Carbone) and his associates. The notice details:

1. My priority based on timestamped files from 2018 (seven years before his “Harmonic Codex”).
2. His download of my work from Zenodo before he filed the complaint.
3. His impersonation of a legitimate LIGO researcher (Dr. Ludovico Carbone).
4. His fraudulent misrepresentation of having a paper under peer review.
5. His breach of my license by downloading and then copying my work.

I have demanded that he retract his false claims and notify Zenodo that his complaint had no basis.

I respectfully request that Zenodo:

- Reinstates my account and restore all my preprints.
- Investigate the authenticity of the copyright complaint that led to my suspension.

I am the original author of this work. The evidence is now on record. I trust Zenodo will correct this error.

Thank you.

Sincerely,

Peter James Thompson

Declaration of Generative AI and AI-Assisted Technologies in the Writing Process During the preparation of this manuscript, the author Peter James Thompson utilized Deepseek to assist with text phrasing, grammar structuring, and manual data-entry assistance. This technology was strictly utilized as a medical assistive accommodation due to severe physical mobility and dexterity limitations caused by advanced, aggressive Dupuytren's contracture in both hands. The author reviewed, edited, and verified all core concepts, calculations, and bibliographic references, and take full human responsibility and accountability for the accuracy and scientific integrity of the final content.

CERN's Own AI Policy: The General Principles for the Use of AI at CERN explicitly state that AI must promote fairness, inclusiveness, and non-discrimination. It does not ban AI; it simply mandates that the user maintains human control and takes responsibility for the accuracy of the output

I therefore request my access and all papers are restored immediately.

Further the only upload that ai copilot had direct input of content is the published book The framework of Reality Rev III where the AI produced the maths directly from my physics and in the rear section it was attributed as at that time I couldn't fully comprehend the mathematical equations. Since this publication I now fully understand this side of the physics.

Regards
Peter thompson
