

Statement of Facts:

A Final Observation

Nikola Tesla said: *“If you want to find the secrets of the universe, think in terms of energy, frequency and vibration.”*

Albert Einstein said: when asked how it felt to be the smartest man on Earth, he replied: *“I wouldn’t know. Ask Nikola Tesla.”*

“Tesla was an electrical engineer. Einstein was a theorist. The GUT marries both.”

While physicists produce theoretical papers, it is often an **electrical engineer** who fills the practical gaps to build functional systems.

CERN’s very own paper is smoking gun evidence:

CERN/GSI (2024, *Nature Physics*) – measured a coupled 4D phase space resonance (“ghost”) in the SPS. The GUT identifies this as a harmonic node of the 27 Hz anchor ($n \approx 4.96$). CERN has no explanation for its origin; the GUT predicted it before the measurement. This is a direct, peer-reviewed confirmation of a core GUT prediction.

Peter James Thompson has been an electrical engineer for 40 years and has been researching a Grand Unified Field Theory for 30 of those years. He has compiled a comprehensive, testable, and internally consistent body of work – the **Harmonic Grand Unified Theory (GUT)** – which is freely available online and has been for years.

Despite this, **no physicist will publicly conduct a proper peer review of his work.**

The direct question this raises is clear:

Why is the mainstream physics community so deeply unwilling to examine a detailed, long-standing, and potentially groundbreaking unified theory, especially when it comes from someone with the practical engineering background that figures like Tesla said was essential in this field?

The refusal to engage stands as a powerful statement in itself.

Anticipated Objections – and the Answers

- **They will say your papers are not peer-reviewed.**
The *response*: “The peer-review system is captured by the paradigm that CERN itself funds. The papers are internally consistent and make testable predictions. The fact that no mainstream journal has accepted them is evidence of institutional bias, not scientific error.”
- **They will assume the work contradicts Einstein’s $E=mc^2$.**
The *response*: “Some assume the work contradicts Einstein’s $E=mc^2$. It does not – it reinterprets and extends it, combining Einstein’s geometry with Tesla’s frequency and Kaluza-Klein dimensions. To reinterpret the work of the greats in physics causes offence and a bias in judgement of my work. The fact is the work is a reinterpretation of Einstein’s work, combining it with Tesla, Kaluza, and Klein – no new additions have been made to the core theories.”
- **They will deny the deletion was deliberate.**
The *response*: “Whether deliberate or not, the effect is suppression. A CERN-affiliated platform removed a complete unified theory from public access. That is a failure of stewardship.”

- **They will argue that your theory is speculative.**

The *response*: . The 32-harmonic comb in the muon g-2 data is a public, falsifiable prediction that matches the GUT.

- Independent, peer-reviewed papers have validated core predictions of the framework:
 - **Shamir (2025, *Monthly Notices of the Royal Astronomical Society*)** used JWST data to show a 2:1 imbalance in the rotation direction of 263 spiral galaxies, which directly confirms the GUT's predicted galaxy spin bias caused by the global phase gradient of the 27 Hz Tau lattice. Mainstream cosmology has no explanation for this.
 - **Farrah et al. (2023, *ApJL*)** found that black holes grow as a^3 with cosmological coupling $k=3$ – exactly the condition $m+m'=0$ predicted by the GUT for dark energy.
 - **University of Toronto (2024, *Nature Materials*)** reported a Ni-Bi van der Waals heterostructure that exhibits high-temperature superconductivity via a sharp interface – the same $m+m'=0$ mass-splitting mechanism described in the GUT's 2018 birefringent quartz design.
 - **Rukan, Skaar et al. (2026, *Physical Review Letters*)** theoretically proved that abruptly truncating a photon's wave packet excites an infinite superposition of photons – the “truncated photon” effect, which directly confirms the GUT's wave-packet splitting principle.
 - The 27Hz anchor is empirically observed (Schumann resonance at 27.3 Hz, sonoluminescence optimum at 26.1-27.9 kHz, cat purr centred on 27 Hz, mantis shrimp strike at 27 kHz)
 - **Lightning**: The 2025 paper in *Plasma Physics Reports* provides a modern analysis of the plasma channel and the relationship between the stepped leader and the return stroke.
 - **Security Evaluation Office ER-2531X-88 16 June 1988 NOTE FOR: John Helgersen SD/OCA**
 - **The Harmonic Grand Unified Theory A Frequency-Based Framework for Matter, Antimatter and Dark Matter Across Three Temporal Dimensions**
Predictive computer program & paper to calculate new particles across matter, antimatter and dark-matter. Github <https://github.com/peterjamesthompson101-svg/Physics-Papers/blob/main/The%20Harmonic%20Grand%20Unified%20Theory%20A%20Frequency%E2%80%91Based%20Framework%20for%20Matter%2C%20Antimatter%20and%20Dark%20Matter%20Across%20Three%20Temporal%20Dimensions.pdf>
 - **harmonic model (UHSM) – Zenodo DOI 10.5281/zenodo.19148567 (March 2026)** – maps particle properties onto a $\log_2$ -based phase space using the Higgs boson mass (125.18 GeV) as a reference. Statistical validation against experimental data yields $R^2 = 0.999957$, $\chi^2/\text{dof} = 0.086$, and $p = 4.76 \times 10^{-23}$. It achieves 0.0279% mean error for particles above 1 GeV and predicts specific beyond-Standard-Model particles at harmonic intervals (sterile neutrino at 166.3 GeV, heavy scalar at 247.8 GeV, gravitino-like at 3.24 TeV, ultra-light axion at 0.157 meV). This demonstrates that harmonic methods – the same principles as the GUT – are reproducible and effective, even when developed by other researchers. CERN has ignored all of it.
 - **CERN/GSI (2024, *Nature Physics*)** – measured a coupled 4D phase space resonance

(“ghost”) in the SPS. The GUT identifies this as a harmonic node of the 27 Hz anchor ($n \approx 4.96$). CERN has no explanation for its origin; the GUT predicted it before the measurement. This is a direct, peer-reviewed confirmation of a core GUT prediction.

“Speculation ends where testable predictions and independent empirical confirmations begin.”

while not proven or tested- *the GUT has produced engineering blueprints for a nuclear force field (capable of shielding against radiation and physical attack), a zero-point energy generator, antimatter generator and power unit and a room-temperature superconductor amongst other. These designs are testable and, if validated, would further confirm the framework. As a matter of security of nations the work by Mr Thompson should undergo complete review.*

CERN spent billions to find 2 particles. Thompson’s free program finds every element, anti-element, and dark matter. An independent harmonic model (UHSM, DOI 10.5281/zenodo.19148567) finds sterile neutrinos, heavy scalars, and axions at exact masses with $R^2 = 0.999957$. Three independent harmonic models. Zero billions spent. Infinite predictions.

The burden of proof has shifted. The evidence is public. The only remaining question is why CERN refuses to engage, why they deleted the files, suspended Thompson's account, refused to reinstate it, refused disability accommodations their own policies allow and the laws demand...
