Dear Catherine Spencer,

Thank you for your message and for confirming receipt of my whistleblowing report. I appreciate that CERN is giving this matter attention.

The first form case 6VCQ-86D5283 returned an error, so I filed a second, BYC4-86D5285. My apologies for the duplication.

I write to add context that I believe is relevant to the investigation.

1. Disability and the AI disclosure policy

I have always preferred to keep my disability a private matter. It is a highly aggressive disease that is not involved in the work I perform nor the business of others. The policy that forces me to disclose my use of AI – and by implication, my disability – violates my medical privacy and forces me to publicise a private health condition against my will.

My original work was deleted from Zenodo under the rationale that it was “substantially AI-generated without a verifiable research basis”. In my appeal, I explained that I use AI language software solely as a **reasonable accommodation for a severe physical disability** (Dupuytren’s contracture). The policy that forces me to disclose the use of AI – even as an assistive tool – has had two harmful effects:

1. **It segregates and stigmatises.** By requiring a disabled person to advertise the use of an assistive tool, the policy effectively announces to the world: “This author is different.” That opens the door to differential treatment – whether pity, disregard, competition, or even speculation about the nature of the disability. I am not more or less than anyone else. Anything that explicitly segregates me on the basis of my disability is, in my view, egregious.
2. **It casts suspicion and invites dismissal.** The public notice that AI was used immediately raises doubts about reliability, accuracy, and originality. AI can be wrong, can hallucinate, and can be biased by its training data. By attaching such a notice to my work, the platform has made it easy for others to dismiss my research as irrelevant, false, or suspect – without ever engaging with its content. This has already happened.

I am not asking for special treatment. I am asking that my work be judged on its scientific merit, not on the tools I used to overcome my disability or the disability themselves. **I have the lawful right to privacy, non-segregation, non-judgement, and accommodation for a disability outside my control. This is within CERN's own policies.**

2. The high number of papers – not AI-generated

I have worked as an electrical engineer for **40 years**, and for the last **30 of those years** I have been developing this Grand Unified Theory, because I found the accepted physics (the Standard Model, general relativity) to be fragmented and problematic. The large number of papers I uploaded to Zenodo is **not** due to AI-generated content. Rather, it is the result of decades of old notes, manuscripts, and partial derivations being rewritten, reorganised, and combined into coherent papers. The 2018 manuscript that establishes priority is one such original document. The subsequent preprints are refinements and extensions of that foundational work.

3. Supporting document: scientific paper

Attached is the revised edition of my Grand Unified Theory paper, *The Harmonic Grand Unified Theory: A Frequency-Based Framework for Matter, Antimatter and Dark Matter Across Three Temporal Dimensions*.

This paper includes:

- Original equations and testable predictions (superheavy elements, dark matter mass ladder, quantum handshake experiments).
- A complete, runnable Python simulator (code included).
- **Testable and falsifiable predictions.**
- Citations to independent, peer-reviewed research on three-dimensional time (Kletetschka 2025, Pismen 2025, the (3+3) Framework, 2T physics), showing that the concept is not fringe.

This paper directly contradicts Zenodo's claim that my work is "substantially AI-generated without a verifiable research basis". It is a coherent, falsifiable, computationally implemented theory that has taken decades to develop. The independent, peer-reviewed confirmations I have submitted (Toronto 2024, PRL 2026, Shamir 2025, etc.) demonstrate that my core principles are reproducible and valid – regardless of how the words were typed.

I am not asking CERN to judge the scientific correctness of the paper. I am providing it as evidence that my research is legitimate and that the deletion of my account was therefore unjustified and retaliatory.

Thank you for your continued attention to this matter. I trust that your investigation will consider the systemic issues raised by my case.

Sincerely,

Peter James Thompson

Attachments:

1. Current surgical referral for multiple cord release in hands and feet
2. GUT paper (PDF)
3. Any materials referred to in forms will be sent upon request.

Note on duration: I am currently awaiting a surgical appointment for release of the affected cords in my hands. The earliest I can be seen is December 2026. My use of AI as an assistive writing tool is therefore a **temporary reasonable accommodation** – necessary only until I can undergo surgery. I am not asking for a permanent exception to policy, only for a short-term adjustment based on medical need.

P.S. While the attached paper is purely theoretical – everything in science is purely theoretical. It is a theory based on thought and observation, which can be proven or falsified in the future. It may align with the lines of others' research or not. None of this means it is without scientific merit, because it follows the unspoken principles, the nature, and the spirit of science. With or without the use of AI, it does not diminish the scientific standard all should aspire to in this profession. I am not asking for an apology or publicity of possible errors – only that I can continue my work in peace without further judgement by anyone regarding my use of AI as a disability accommodation, and temporary accommodation of disability until surgical treatment is available, **as per CERN's policy on this matter.**
